

Modulbezeichnung	Environmental Microbiology	
Semester	null	
ECTS-Punkte (Dauer)	5 (1 Semester)	
Art	Compulsory optional subject	
Studentische Arbeitsbelastung	60 h Kontaktzeit + 90 h Selbststudium	
Voraussetzungen (laut BPO)		
Empf. Voraussetzungen	Basic theoretical and practical knowledge in microbiology	
Verwendbarkeit	DEL	
Prüfungsform und -dauer	Presentation and examination (1 hour written examination or 0.5 hour oral examination)	
Lehr- und Lernmethoden	Theoretical introduction/lecture, oral presentation of a relevant topic in this field, practical work in S2 labs, field trips for sampling	
Modulverantwortlicher	C. Gallert	
Qualifikationsziele		
Students present relevant/actual data in the field of environmental microbiology (water or bathing water quality, antimicrobial resistance, hygienic aspects etc.) from scientific literature. Students know the requested analytical methods and the relevant boundary values or other parameters in order to evaluate the obtained results according to respective legislation. Students are able to search data from literature in order to classify obtained results and provide the results as a report.		
Lehrinhalte		
Self-organization and preparation of required materials needed in the field for sampling and in the laboratory. Preparation of a to-do-list for analyzing samples according to national standards. Presentation of obtained results in the context of similar samples (literature review) and evaluation of data.
